

Compuware  
OptimalJ®

Upcoming Webcast

## OptimalJ 4.1 Highlights and Overview

Presented by  
**Mike Sawicki**  
OptimalJ Product Manager

Wouldn't you like to reduce the time, cost, risk and complexity associated with delivering and maintaining enterprise Java applications? Come and learn a better approach with a pragmatic model-driven development tool.

Compuware recently announced the immediate availability of its new OptimalJ 4.1 release. With this announcement we are offering an upcoming webcast that will provide an overview of the release. This information will benefit anyone interested in accelerating application development and developing better software. Unlike traditional development solutions that are slow and error-prone, OptimalJ maximizes team productivity by leveraging existing standards and guidelines, which translates into high-value, business-driven application development.

The OptimalJ 4.1 release offers many improvements and new functionality which will be highlighted in this webcast including:

- Professional Edition Built on Eclipse brings the productivity of model-driven development to the Eclipse platform.
- The Domain Use Case model provides easier synchronization between requirements, design models and code, which creates traceability throughout the application life cycle and enables development teams to effectively evaluate the impact of changes to the application and manage the change process.
- Adds award-winning UML modeling capabilities by incorporating MagicDraw from No Magic, Inc. The entire development team can now quickly visualize designs as UML 2.0 diagrams in just a few easy steps. Class and Use Cases can be imported directly to the OptimalJ domain models for application architecture and code generation.

### About the presenter

The event will feature Mike Sawicki, product manager for Compuware OptimalJ and an expert on model-driven development. Mike has frequently presented on the subjects of development standards, best practices and the effects of model-driven development on organizational measurements of efficiency. He has spoken at many of the industry's leading conferences, including SD West (keynote), JavaOne, Gartner Application Development Summit, ITExpo and most recently EclipseCon.
